Yes, I think we have a little confusion on that issue. Bob Dexter proposed 3 stations plus 1 control. I heard Jeremy say something a little different, so we still need to clear up this issue. I will point that out to the group.

Thanks... and (b) (6) .

Thanks Rose. I figured that the six locations that Rob identified would be cut down to 3. One question I had was whether we were talking about one control and three stations from the study area or one control and two stations from the study area. I have heard both. It would be good to clear this up as well as prioritize the station locations.

I think the 2:00 pm call on Monday is the way to go.

Eric

Hi Eric! Rob wanted me to let you know that the proposed sample locations still need to be prioritized. We are not proposing 6 sample locations for the pilot study; these are the six locations for us to consider further. I believe Jen and Jeremy were going to review and prioritize.

At this point, the plan is to have the "technical" conference call with LWG on Monday at 2pm. Hopefully, the 3 proposed sample locations can be

finalized prior to that call.

Thanks for all your help and support.

~hugs,
rose

Hey Y'all,

[REDACTED] ull this together yesterday (b) (6)
[REDACTED] kily power outlets were available because my battery completely dead). Anyway ... two files attached. One showing proposed sampling locations along with tox data and predicted benthic risk. I also looked at sediment concentrations of various contaminants in placing these points. So the other attachment provides a summary of chemicals that exceeded either PEC or TEC. Hope this is helpful. Sorry I

[REDACTED] make the call today. (b) (6)
[REDACTED] .

Talk to y'all soon.

-R
